Guideline for Using Generative Artificial Intelligence (AI) Tools

Arizona State University seeks to balance the promise of generative Artificial Intelligence (AI) tools to improve learning outcomes with the need for academic integrity, rigor and transparency.

Use of Generative Artificial Intelligence (AI) is Generally Permitted Within Guidelines

AI tools might be employed to brainstorm, draft, edit, revise, etc. If AI tools are used in open-book exams or course projects, the student must explicitly acknowledge it and cite the use properly (Click here to see a guide). Any submitted course assignment not explicitly identified as having used generative AI will be assumed to be your original work. Using AI tools to generate content without proper attribution will be considered a violation of the ASU Academic Integrity Policy, and students may be sanctioned for confirmed, non-allowable use. If at any point you have questions about what is permitted, contact the instructor to discuss *before* submitting work.
