Guide for Exam Preparation
SOS 513

- Make sure to read (1) all the chapters of the textbook, (2) other required readings listed on the class website, and (3) the instructor’s lecture notes.
- All exam questions will come from the above three sources. Note that material covered in student presentations but not in the textbook will not be part of the exam.
- Focus on key concepts and principles, as well as diagrams and figures in the textbook and required readings. Make sure to understand the summary points in each chapter.
- All questions will be in the form of multiple choices or true/false in order to maximize the objectivity of exam grading.
- The exam will not have mathematical questions, but you are expected to understand the general ideas represented by the System Dynamics approach used in the book.
